## Special Thanks

- Alison Huettner for project management and editorial review.
- Jaclyn Snyder and Janet Sinopoli for their contributions to the Teacher's Implementation Guide facilitation notes.
- Victoria Fisher for her review of content and contributions to all the ancillary materials.
- Valerie Muller for her contributions and review of content.
- The members of Carnegie Learning's Cognitive Scientist Team—Brendon Towle, John Connelly, Bob Hausmann, Chas Murray, and Martina Pavelko—for their insight in learning science and review of content.
- Bob Hausmann for his contributions to the Family Guide.
- John Jorgenson, Chief Marketing Officer, for all his insight and messaging.
- Carnegie Learning's Education Services Team for content review and providing customer feedback.
- In Memory of David Dengler, Director of Curriculum Development (deceased), who made substantial contributions to conceptualizing Carnegie Learning's middle school software.

# Acknowledgments

## Texas Math Solution Content Authors

- Mia Arterberry, STEM Instructional Designer
- Sami Briceño, Senior Custom Solution Content Lead
- Christine Mooney, Custom Solution Content Specialist

## Texas Math Solution Custom Development Team

- Erin Boland
- Desiree Brown
- Allison Carden
- Elizabeth Everett
- Erika Genis
- Grete Giesin
- Jesse Hinojosa
- Bethany Jameson
- Todd Johnson

## Special Thanks

- The entire Carnegie Learning Production Team, with extreme gratitude for Sara Kozelnik, Julie Leath, Lindsay Ryan, Angela Cerbone, Hannah Mumm, and Emily Tope, for their patience, attention to detail, and around-the-clock hours that made the production of this textbook possible.
- David Bailis and the Westchester Education Services team for developing assessments.
- Texas Education Agency for partnering together to customize this textbook.
- The SchoolKit review team for ensuring that every page in this textbook meets or exceeds the Texas Home Learning 3.0 Quality Review Rubric.

“Mathematics is so much more than memorizing rules. It is learning to reason, to make connections, and to make sense of the world. We believe in Learning by Doing<sup>(TM)</sup>—you need to actively engage with the content if you are to benefit from it. The lessons were designed to take you from your intuitive understanding of the world and build on your prior experiences to then learn new concepts. My hope is that these instructional materials help you build a deep understanding of math.”

Sandy Bartle Finocchi, Chief Mathematics Officer

“My hope is that as you work through this course, you feel capable—capable of exploring new ideas that build upon what you already know, capable of struggling through challenging problems, capable of thinking creatively about how to fix mistakes, and capable of thinking like a mathematician.”

Amy Jones Lewis, Senior Director of Instructional Design

“At Carnegie Learning we have created an organization whose mission and culture is defined by your success. Our passion is creating products that make sense of the world of mathematics and ignite a passion in you. Our hope is that you will enjoy our resources as much as we enjoyed creating them.”

Barry Malkin, CEO

# Table of Contents

---

## Module 1: Thinking Proportionally

### Topic 1: Circles and Ratio

- 1.1 Pi: The Ultimate Ratio  
Exploring the Ratio of Circle Circumference to Diameter
- 1.2 That's a Spicy Pizza  
Area of Circles
- 1.3 Circular Reasoning  
Solving Area and Circumference Problems

### Topic 2: Fractional Rates

- 2.1 Making Punch  
Unit Rate Representations
- 2.2 Eggzactly!  
Solving Problems with Ratios of Fractions
- 2.3 Tagging Sharks  
Solving Proportions Using Means and Extremes

### Topic 3: Proportionality

- 3.1 How Does Your Garden Grow?  
Proportional Relationships
- 3.2 Complying with Title IX  
Constant of Proportionality
- 3.3 Fish-Inches  
Identifying the Constant of Proportionality in Graphs
- 3.4 Minding Your Ps and Qs  
Constant of Proportionality in Multiple Representations

---

## Module 2: Applying Proportionally

### Topic 1: Proportional Relationships

- 1.1 Markups and Markdowns  
Introducing Proportions to Solve Percent Problems
- 1.2 Perks of Work  
Calculating Tips, Commission, and Simple Interest

- 1.3 No Taxation Without Calculation  
Sales Tax, Income Tax, and Fees
- 1.4 More Ups and Downs  
Percent Increase and Percent Decrease
- 1.5 Pound for Pound, Inch for Inch  
Scale and Scale Drawings

## **Topic 2: Financial Literacy: Interest and Budgets**

- 2.1 Student Interest  
Simple and Compound Interest
- 2.2 Aren't Peace, Love, and Understanding Worth Anything?  
Net Worth Statements
- 2.3 Living Within Your Means  
Personal Budgets

---

## **Module 3: Reasoning Algebraically**

### **Topic 1: Operating with Rational Numbers**

- 1.1 All Mixed Up  
Adding and Subtracting Rational Numbers
- 1.2 Be Rational!  
Quotients of Integers
- 1.3 Building a Wright Brothers' Flyer  
Simplifying Expressions to Solve Problems
- 1.4 Properties Schmoperties  
Using Number Properties to Interpret Expressions with Signed Numbers

### **Topic 2: Algebraic Expressions**

- 2.1 No Substitute for Hard Work  
Evaluating Algebraic Expressions
- 2.2 Mathematics Gymnastics  
Rewriting Expressions Using the Distributive Property
- 2.3 All My Xs  
Combining Like Terms

### **Topic 3: Two-Step Equations and Inequalities**

- 3.1 Picture Algebra  
Modeling Equations as Equal Expressions

- 3.2 Expressions That Play Together...  
Solving Equations on a Double Number Line
- 3.3 A Formal Affair  
Using Inverse Operations to Solve Equations and Inequalities

## **Topic 4: Multiple Representations of Equations**

- 4.1 Put It on the Plane  
Representing Equations with Tables and Graphs
- 4.2 Deep Flight I  
Building Inequalities and Equations to Solve Problems
- 4.3 Texas Tea and Temperature  
Using Multiple Representations to Solve Problems

---

# **Module 4: Analyzing Populations and Probabilities**

## **Topic 1: Introduction to Probability**

- 1.1 Rolling, Rolling, Rolling...  
Defining and Representing Probability
- 1.2 Give the Models a Chance  
Probability Models
- 1.3 Toss the Cup  
Determining Experimental Probability of Simple Events
- 1.4 A Simulating Conversation  
Simulating Simple Experiments

## **Topic 2: Compound Probability**

- 2.1 Evens or Odds?  
Using Arrays to Organize Outcomes
- 2.2 Who Doesn't Love Puppies?!  
Using Tree Diagrams
- 2.3 Pet Shop Probability  
Determining Compound Probability
- 2.4 On a Hot Streak  
Simulating Probability of Compound Events

## **Topic 3: Drawing Inferences**

- 3.1 We Want to Hear From You!  
Collecting Random Samples
- 3.2 Tiles, Gumballs, and Pumpkins  
Using Random Samples to Draw Inferences

- 3.3 Raising the Bar  
Bar Graphs
  - 3.4 Dark or Spicy?  
Comparing Two Populations
  - 3.5 That's So Random  
Using Random Samples from Two Populations to Draw Conclusions
- 

## Module 5: Constructing and Measuring

### Topic 1: Area and Surface Area

- 1.1 Slicing and Dicing  
Composite Figures
- 1.2 Breaking the Fourth Wall  
Surface Area of Rectangular Prisms and Pyramids
- 1.3 Seeing it From a Different Angle  
Special Angle Relationships

### Topic 2: Three-Dimensional Figures

- 2.1 Hey, Mister, Got Some Bird Seed?  
Volume of Pyramids
  - 2.2 Sounds Like Surface Area  
Surface Area of Pyramids
  - 2.3 More Than Four Sides of the Story  
Volume and Surface Area of Prisms and Pyramids
- 

## End of Course Topic

### Formative Assessment

- 1.1 Lawn Boy  
Performance Task
- 1.2 Boot Bargains  
Performance Task
- 1.3 How Many Treats  
Performance Task
- 1.4 Backyard Shed  
Performance Task

### Glossary

# Lesson Structure

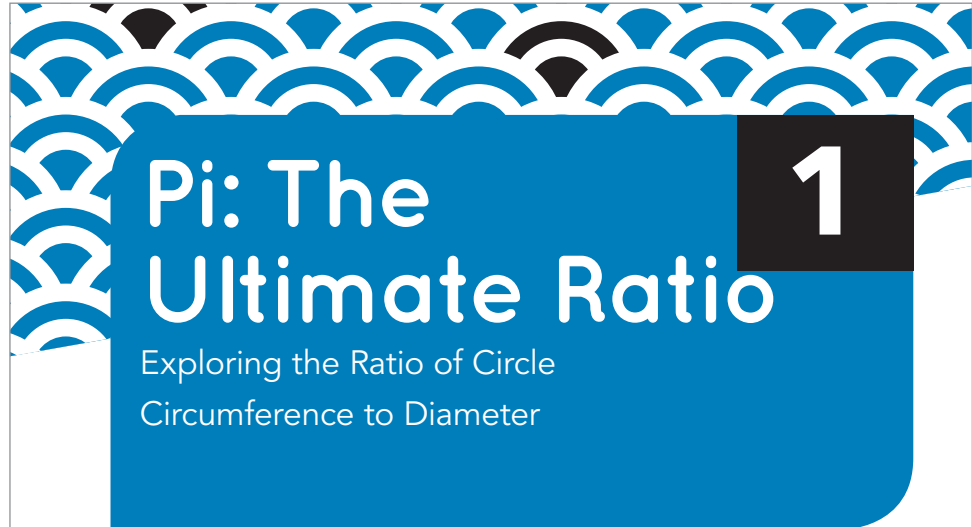

## 1. Learning Goals

Learning goals are stated for each lesson to help you take ownership of the learning objectives.

## 2. Connection

Each lesson begins with a statement connecting what you have learned with a question to ponder.

Return to this question at the end of this lesson to gauge your understanding.

# Pi: The Ultimate Ratio

## Exploring the Ratio of Circle Circumference to Diameter

### 1

**WARM UP**

Scale up or down to determine an equivalent ratio.

- $\frac{18 \text{ miles}}{3 \text{ hours}} = \frac{?}{1 \text{ hour}}$
- $\frac{\$750}{4 \text{ days}} = \frac{?}{1 \text{ day}}$
- $\frac{12 \text{ in.}}{1 \text{ ft}} = \frac{?}{5 \text{ ft}}$
- $\frac{48 \text{ oz}}{3 \text{ lb}} = \frac{?}{1 \text{ lb}}$

**LEARNING GOALS** 1

- Identify pi ( $\pi$ ) as the ratio of the circumference of a circle to its diameter.
- Construct circles using a compass and identify various parts of circles.
- Know and write the formula for the circumference of a circle, and use the formula to solve problems.

**KEY TERMS**

- congruent
- circle
- radius
- diameter
- circumference
- pi

2 You have learned about ratios. How can you use ratios to analyze the properties of geometric figures such as circles?

LESSON 1: Pi: The Ultimate Ratio • 1

3

## Getting Started

### Across and Around

A circle is shown with a point drawn at the center of the circle. The name of the point is  $O$ , so let's call this Circle  $O$ .

Be sure to include units when you record your measurements.

1. Analyze the distance around the circle.
  - a. Use a string and a centimeter ruler to determine the distance around the circle.
  - b. How does your measurement compare to your classmates' measurements? Summarize the similarities and differences.
2. Draw a line from a point on the circle to the center of the circle, point  $O$ .
  - a. Measure your line using your centimeter ruler.
  - b. How does your measurement compare to your classmates' measurements? Summarize the similarities and differences.

**3. Getting Started**  
Each lesson begins with a Getting Started. When working on the Getting Started, use what you know about the world, what you have learned previously, or your intuition. The goal is just to get you thinking and ready for what's to come.

## 4. Activities

You are going to build a deep understanding of mathematics through a variety of activities in an environment where collaboration and conversations are important and expected.

You will learn how to solve new problems, but you will also learn why those strategies work and how they are connected to other strategies you already know.

Remember:

- It's not just about answer-getting. The process is important.
- Making mistakes is a critical part of learning, so take risks.
- There is often more than one way to solve a problem.

Activities may include real-world problems, sorting activities, Worked Examples, or analyzing sample student work.

Be prepared to share your solutions and methods with your classmates.

4

**ACTIVITY 1.1**

### Analyzing the Parts of a Circle

Everyone can identify a circle when they see it, but defining a circle is a word round mathematics.

**Step 1:** In the space

**ACTIVITY 1.2**

### Measuring the Distance Around a Circle

Let's explore circles. Use circles A, B, D, E, and O provided at the end of the page.

Across a circle, a line segment that passes through the center is called a diameter.

1. Use a ruler to measure the length of the diameter of each circle. Record your measurements in the table below.

2. How do you think the circumference of a circle is related to its diameter?

3. Define the constant  $\pi$ .

4. Average the measurements of the diameters and the circumferences of the circles. What do you notice?

**ACTIVITY 1.3**

### The Circumference Formula

NOTES

The number  $\pi$  ( $\pi$ ) is the ratio of the circumference of a circle to its diameter. That is  $\pi = \frac{\text{circumference of a circle}}{\text{diameter of a circle}}$ , or  $\pi = \frac{C}{d}$ , where  $C$  is the circumference of the circle, and  $d$  is the diameter of the circle. The number  $\pi$  has an infinite number of decimal digits that never repeat. Some approximations used for the value  $\pi$  are 3.14 and  $\frac{22}{7}$ .

- Use this information to write a formula for the circumference of a circle, where  $d$  represents the diameter of a circle and  $C$  represents the circumference of a circle.
- Rewrite the formula for the circumference of a circle, where  $r$  represents the radius of a circle and  $C$  represents the circumference of a circle.
- Use different representations for  $\pi$  to calculate the circumference of a circle.
  - Calculate the circumference of a circle with a diameter of 4.5 centimeters and a circle with a radius of 6 inches. Round your answer to the nearest ten-thousandths, if necessary.

Value for $\pi$	$d = 4.5$ centimeters	$r = 6$ inches
$\pi$		
Use the $\pi$ key on a calculator		
Use 3.14 for $\pi$		
Use $\frac{22}{7}$ for $\pi$		

6 • TOPIC 1: Circles and Ratio

TALK the TALK

5

Twice

Use what you have learned to compare circles by their characteristics.

1. Using your compass, draw each circle.

a. radius length of 3 centimeters

b. diameter length of 3 centimeters

2. Des  
two

3. Des  
the

4. Des

Measuring the Distance Around a Circle

5. Talk the Talk

Talk the Talk gives you an opportunity to reflect on the main ideas of the lesson.

- Be honest with yourself.
- Ask questions to clarify anything you don't understand.
- Show what you know!

Don't forget to revisit the question posed on the lesson opening page to gauge your understanding.

# Assignment

## 6. Write

Reflect on your work and clarify your thinking.

## 7. Remember

Take note of the key concepts from the lesson.

## 8. Practice

Use the concepts learned in the lesson to solve problems.

## 9. Stretch

Ready for a challenge?

## 10. Review

Remember what you've learned by practicing concepts from previous lessons and topics.

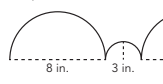

**Assignment** LESSON 1: Pi: The Ultimate Ratio

**6 Write**  
Define each term in your own words.  
1. circle  
2. radius  
3. diameter  
4. pi

**7 Remember**  
The circumference of a circle is the distance around the circle. The formulas to determine the circumference of a circle are  $C = \pi d$  or  $C = 2\pi r$ , where  $d$  represents the diameter,  $r$  represents the radius, and  $\pi$  is a constant value equal to approximately 3.14 or  $\frac{22}{7}$ .  
The constant pi ( $\pi$ ) represents the ratio of the circumference of a circle to its diameter.

**8 Practice**  
Answer each question. Use 3.14 for  $\pi$ . Round your answer to the nearest hundredth, if necessary.  
1. Although she's only in middle school, Tameka's favorite place to drive go-karts is at Driver's Delight. Track 1 has a radius of 60 feet and Track 2 has a radius of 110 feet.  
a. Compute the circumference of Track 1.  
b. Compute the circumference of Track 2.  
c. Compute the ratio of the circumference of Track 1 to the circumference of Track 2.  
d. Driver's Delight is considering adding a third track with a radius of 150 feet. Compute the circumference of this track.  
2. Tameka wants to build a circular track around her school.  
a. If she wants the track to have a radius of 100 feet, what is the circumference?  
b. If she wants the track to have a diameter of 200 feet, what is the circumference?  
c. If she wants the track to have a circumference of 1,000 feet, what is the radius?

**9 Stretch**  
A rope is arranged using three semicircles. The diameter of the largest semicircle is 8 in. The diameter of the smallest semicircle is 3 in.

**10 Review**  
1. Ethan and Corinne are training for a marathon.  
a. Corinne runs 13.5 miles in 2 hours. What is her rate?  
b. Ethan wants to run the 26.2 miles of the marathon in 4.5 hours. At about what rate will he have to run to reach this goal? Round to the nearest tenth.  
2. Fifteen seventh graders were randomly selected to see how many pushups in a row they could do. Their data are shown.  
45, 40, 36, 38, 42, 48, 40, 40, 70, 45, 42, 43, 48, 36  
a. Determine the mean of this data set.  
b. Determine the median of this data set.  
3. Convert each measurement.  
a.  $4\frac{1}{2}$  pounds = \_\_\_ oz  
b. 22.86 cm = \_\_\_ in.

2 • TOPIC 1: Circles and Ratio

# Problem Types You Will See

## WORKED EXAMPLE

$$\frac{11}{3}x + 5 = \frac{17}{3}$$

**Step 1:**  $3\left(\frac{11}{3}x + 5\right) = 3\left(\frac{17}{3}\right)$

**Step 2:**  $11x + 15 = 17$

**Step 3:**  $x = \frac{17 - 15}{11}$   
 $= \frac{2}{11}$

$$\frac{1}{2}x + \frac{3}{4} = 2$$

$4\left(\frac{1}{2}x + \frac{3}{4}\right) = 4(2)$

$2x + 3 = 8$

$x = \frac{8 - 3}{2}$   
 $= \frac{5}{2}$

## Worked Example

### When you see a Worked Example:

- Take your time to read through it.
- Question your own understanding.
- Think about the connections between steps.

### Ask Yourself:

- What is the main idea?
- How would this work if I changed the numbers?
- Have I used these strategies before?

## Thumbs Up

### When you see a Thumbs Up icon:

- Take your time to read through the correct solution.
- Think about the connections between steps.

### Ask Yourself:

- Why is this method correct?
- Have I used this method before?

## Thumbs Down

### When you see a Thumbs Down icon:

- Take your time to read through the incorrect solution.
- Think about what error was made.

### Ask Yourself:

- Where is the error?
- Why is it an error?
- How can I correct it?

Analyze the solution strategy and solution for each inequality.

Ella

$$-\frac{1}{2}x + \frac{3}{4} < 2$$

$$-4\left(-\frac{1}{2}x + \frac{3}{4} < 2\right)$$

$$2x - 3 > -8$$

$$2x > -5$$

$$x > \frac{-5}{2}$$

$$x > -2.5$$

Describe the strategy that Ella used correctly.

Jeff

$$-12x + 20 < 32$$

$$\frac{-12x + 20}{-4} < \frac{32}{-4}$$

$$3x - 5 < -8$$

$$3x < -3$$

$$x < -1$$

Identify the error in Jeff's strategy and determine the correct solution.

## Who's Correct

### When you see a Who's Correct icon:

- Take your time to read through the situation.
- Question the strategy or reason given.
- Determine correct or not correct.

### Ask Yourself:

- Does the reasoning make sense?
- If the reasoning makes sense, what is the justification?
- If the reasoning does not make sense, what error was made?

Vanessa was given a math problem to determine how many different rectangles can be constructed with an area of 12 square inches.

**Vanessa thinks that there are only two: one with a width of 2 inches and a length of 6 inches, and another with a width of 3 inches and a length of 4 inches. Is she correct? Explain your reasoning.**

## The Crew

The Crew is here to help you on your journey. Sometimes they will remind you about things you already learned. Sometimes they will ask you questions to help you think about different strategies. Sometimes they will share fun facts. They are members of your group—someone you can rely on!

Teacher aides will guide you along your journey. They will help you make connections and remind you to think about the details.

# Mathematical Process Standards

## Texas Mathematical Process Standards

Effective communication and collaboration are essential skills of a successful learner. With practice, you can develop the habits of mind of a productive mathematical thinker. The “I can” expectations listed below align with the TEKS Mathematical Process Standards and encourage students to develop their mathematical learning and understanding.

### ► Apply mathematics to problems arising in everyday life, society, and the workplace.

I can:

- use the mathematics that I learn to solve real world problems.
- interpret mathematical results in the contexts of a variety of problem situations.

### ► Use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying a solution, and evaluating the problem solving process and reasonableness of the solution.

I can:

- explain what a problem “means” in my own words.
- create a plan and change it if necessary.
- ask useful questions in an attempt to understand the problem.
- explain my reasoning and defend my solution.
- reflect on whether my results make sense.

- ▶ **Select tools, including real objects, manipulatives, paper and pencil, and technology as appropriate; and techniques including mental math, estimation, and number sense as appropriate, to solve problems.**

I can:

- use a variety of different tools that I have to solve problems.
- recognize when a tool that I have to solve problems might be helpful and when it has limitations.
- look for efficient methods to solve problems.
- estimate before I begin calculations to inform my reasoning.

- ▶ **Communicate mathematical ideas, reasoning, and their implications using multiple representations including symbols, diagrams, graphs, and language as appropriate.**

I can:

- communicate and defend my own mathematical understanding using examples, models, or diagrams.
- use appropriate mathematical vocabulary in communicating mathematical ideas.
- make generalizations based on results.
- apply mathematical ideas to solve problems.
- interpret my results in terms of various problem situations. interpret my results in terms of various problem situations.

- ▶ **Create and use representations to organize, record, and communicate mathematical ideas.**

I can:

- consider the units of measure involved in a problem.
- label diagrams and figures appropriately to clarify the meaning of different representations.
- create an understandable representation of a problem situation.

# Academic Glossary

Visit the Students & Caregivers Portal on the Texas Support Center at [www.CarnegieLearning.com/texas-help](http://www.CarnegieLearning.com/texas-help) to access the Mathematics Glossary for this course anytime, anywhere.

There are important terms you will encounter throughout this book. It is important that you have an understanding of these words as you get started on your journey through the mathematical concepts. Knowing what is meant by these terms and using these terms will help you think, reason, and communicate your ideas.

## Related Phrases

- Examine
- Evaluate
- Determine
- Observe
- Consider
- Investigate
- What do you notice?
- What do you think?
- Sort and match

## ANALYZE

### Definition

To study or look closely for patterns. Analyzing can involve examining or breaking a concept down into smaller parts to gain a better understanding of it.

### Ask Yourself

- Do I see any patterns?
- Have I seen something like this before?
- What happens if the shape, representation, or numbers change?

## Related Phrases

- Show your work
- Explain your calculation
- Justify
- Why or why not?

## EXPLAIN YOUR REASONING

### Definition

To give details or describe how to determine an answer or solution. Explaining your reasoning helps justify conclusions.

### Ask Yourself

- How should I organize my thoughts?
- Is my explanation logical?
- Does my reasoning make sense?
- How can I justify my answer to others?

## REPRESENT

### Definition

To display information in various ways. Representing mathematics can be done using words, tables, graphs, or symbols.

### Ask Yourself

- How should I organize my thoughts?
- How do I use this model to show a concept or idea?
- What does this representation tell me?
- Is my representation accurate?

### Related Phrases

- Show
- Sketch
- Draw
- Create
- Plot
- Graph
- Write an equation
- Complete the table

## ESTIMATE

### Definition

To make an educated guess based on the analysis of given data. Estimating first helps inform reasoning.

### Ask Yourself

- Does my reasoning make sense?
- Is my solution close to my estimation?

### Related Phrases

- Predict
- Approximate
- Expect
- About how much?

## DESCRIBE

### Definition

To represent or give an account of in words. Describing communicates mathematical ideas to others.

### Ask Yourself

- How should I organize my thoughts?
- Is my explanation logical?
- Did I consider the context of the situation?
- Does my reasoning make sense?

### Related Phrases

- Demonstrate
- Label
- Display
- Compare
- Determine
- Define
- What are the advantages?
- What are the disadvantages?
- What is similar?
- What is different?
